### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: Upon careful reconsideration the Examiner now believes that the 35 USC 102/103 rejection of record based upon Luhmann et al '397 must be withdrawn. The reference fails to appreciate that there are three forces which cause the frictional forces which can and do arise between two articles. These are the claimed roughness of the materials rubbing against one another, the deformations in the contacting materials (e.g. rubber) and the molecular attractions between the materials. These forces in a given arrangement are not necessarily constant, depending upon a number of variables. Luhmann et al '397 sets its friction coefficients (Col 5, lines 25-37) in the edge region so that the sum of the stripping force and frictional force is lower than the tearing force of the adhesive films used even at pulling off angles significantly above 0 degrees from the underlying surface, which leads to an adequate reduction of the frictional force being achieved. The frictional components modified by Luhmann et al '397 are the aforementioned surface deformation and molecular attraction. The reference is not found to modify surface roughness or suggest such. Thus, despite a functionally equivalent article being produced by the reference the article is not physically equivalent to the claimed article, and so the rejection of record must be withdrawn. It should also be noted that one of ordinary skill might normally expect that modifying, i.e. increasing, the surface roughness of an article might well degrade the article's tensile strength, thus arguing to the nonobviousness of the claimed invention.
